

# SOLAR REFLECTIVE SHINGLES

# BEAT THE HEAT. DO IT IN STYLE.

## WHY COOL SHINGLES?

Our solar reflective shingles provide more than just a roof over your head. Infused with solar-reflective granules, these shingles reflect heat-producing Near Infrared (NIR) rays from the sun back into the atmosphere, which may reduce heat transfer into your home.

We understand different climates require different needs, which is why our solar reflective colors are compliant for California residents (California Energy Code Title 24, Part 6), and those which feature our Algae Defender® protection, especially for coastal regions and tropical climates\*. All Premier Radiance® colors contain our cool granules that are specially formulated to be up to four times more reflective than comparable standard colored granules.

*Printed colors shown in this brochure may vary from actual shingle colors. Color selection should be made with 2-3 full size shingles.*
